## *KKSP Precision Machining LLC Has Hydromat Rotary Transfer Machine Capability*

---

Not only is KKSP Precision Machining, LLC one of North America's largest sources of multi-spindle screw machine product, KKSP also has several Hydromat Rotary Transfer machines. These multi-task machines allow us to manufacture a highly complex component while fixturing the part only once. The end result is a more sophisticated and tightly toleranced part at a competitive price.

### **Flexible / Reliable / Higher Quality / Greater Productivity**

These diverse machines combine the flexibility of more complex operations with extremely high throughput providing a high level of dimensional consistency. Our fleet includes machines that have 16, 12, and 10 machining stations. For a video demonstration from Hydromat's website click [here](#).

We at KKSP Precision Machining LLC are seeking opportunities to machine parts that have high volumes such that we might dedicate our machines to specific customers and part families.

Markets for Hydromat manufactured parts include:

- Plumbing
- Hydraulic
- HVAC
- Automotive
- Defense
- Medical
- Pneumatic
- Welding
- Connectors & Fittings

---

*If you think that you might have a high volume brass, aluminum or steel part that requires the more complex machining operations afforded by using a rotary transfer (Hydromat) approach, please contact us by calling Roger Bassett at 630-474 0746 or e-mail [rbassett@kksp.com](mailto:rbassett@kksp.com) to discuss your application further.*
